

HP2[™]
HOOK POTENTIAL

OUTCRY[™]

GUTS.

Given the success of the Late Roll 51[™] Core first used in the Rumble[™] and more recently the Uproar[™]. It was only fitting we use this core shape again to create yet another ball that compliments the current lineup in the great performing HP2 line.

GRIT.

The newly formulated 53M[™] Hybrid Reactive coverstock comes out of the box at 4000 grit in order to add a little more variety. Even with texture on the cover out of the box the hybrid will create decent length as well as create stable motion at the break-point.

Factory Finish: *4000-grit pad*

Flare Potential: *4" - 5"*

Coverstock: *53M[™] Hybrid Reactive*

Color: *Silver Pearl / Teal*

Hardness: *73-75 on D-scale*

GRIME.

Again being a higher RG core we knew there would be no issue clearing the front of the lane. The sole purpose of this ball was to complement the Rumble and Uproar. The hybrid cover can be shined to create length with control or it can be sanded to create earlier motion with some strength left down lane. As usual when we build a hybrid you get the best of both worlds.

Lane Condition - **Medium**

0' — 15' — 30' — 45' — 60'

HOW TO KEEP YOUR NEW BALL REACTING STRONG

We strongly believe that preventative maintenance is the key to a cover's longevity.

WHY? The ball's ability to absorb lane oil into the pores helps to keep a dry ball surface in contact with the lane for more friction, creating added hook. Over a period of time, the bowling ball's performance will slowly deteriorate due to oil absorption and dirt build up on the ball's surface.

In addition to using a clean and dry Storm microfiber towel in competition, we highly recommend that a bowling ball cleaner be used immediately afterward to further clean the ball's cover. If a ball is used and then put away without cleaning, the oil and dirt will have a greater chance to be absorbed deeper into the cover.

We hear time and time again from people who have lost hook in their equipment and swear they clean it on a regular basis. Only when the question is asked about when they clean their equipment does the real problem come to light; cleaning a ball just before use removes only a very fine layer while the deeper trapped oil and dirt still remain from your last session. Below is our recommended procedure to maintain your ball's performance:

1. Use a clean, dry Storm microfiber towel during competition
2. At the end of the session, use Storm Reacta Clean™ and spray liberally over the entire surface of the ball
3. Rub your hands over the surface of the ball in a scrubbing motion for 15-20 seconds
4. Towel off the ball until dry

This process will assist the degreasing agent in the cleaner to draw oil and dirt out of the pores; the hand-action helps break down the oil and dirt, making it easier to be removed with a towel.

Ball Maintenance Checklist

WHEN	POLISHED BALLS	DULL BALLS
<i>Between Shots</i>	<i>Wipe with Storm Microfiber Towel</i>	<i>Wipe with Storm Microfiber Towel</i>
<i>After Bowling</i>	<i>Clean with Storm Reacta Clean</i>	<i>Clean with Storm Reacta Clean</i>
<i>Every 10 Games</i>	<i>Re-polish surface with Storm Reacta Shine™</i>	<i>Scuff surface with Abralon® pad to maintain original reaction</i>
<i>Every 30 Games</i>	<i>Scuff surface with Abralon and re-polish with Storm Reacta Shine</i>	
<i>Every 60 Games</i>	<i>Ball is due for full resurface process</i>
